THE SCIENCE OF CLEAN AIR

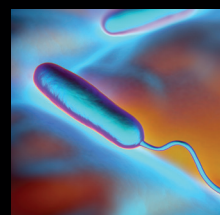

GERM-KILLING UV LIGHT

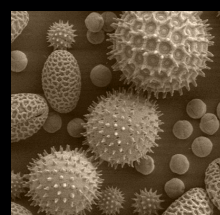

MOLD

VIRUSES

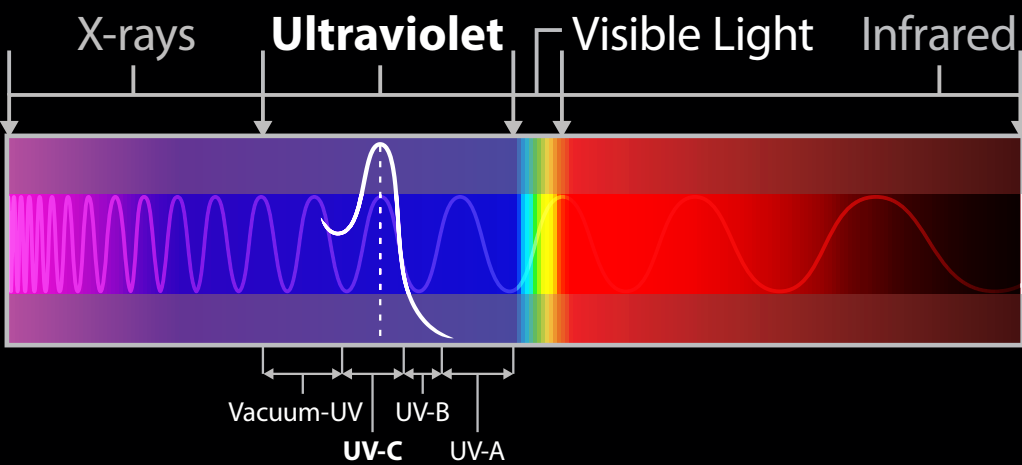

BACTERIA

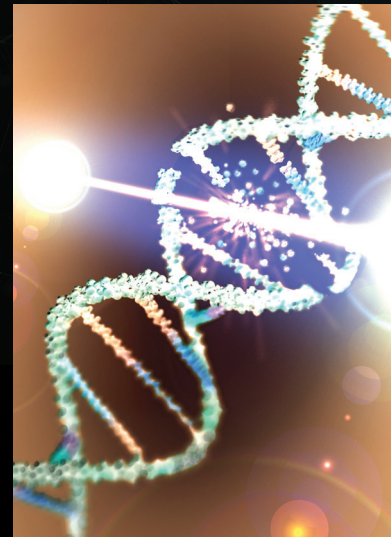

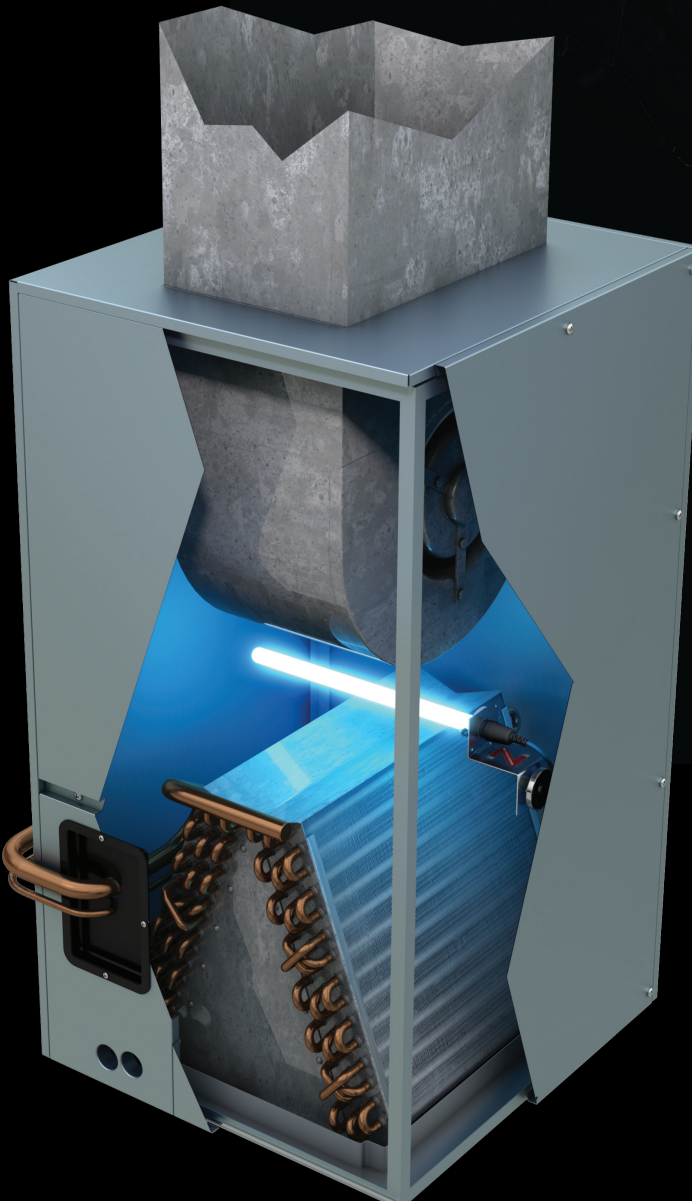

ALLERGENS

DISINFECTION WITH LIGHT

Microbes such as mold, bacteria, and viruses thrive in the cool moist interior of the central air system. Fortunately they have no defense against UV-C light which, in nature, is filtered out by the Earth's atmosphere. The Platinum IAQ™ UV-C Light disinfects air system coils and interior surfaces and sterilizes microbes in the air as it is recycled throughout the home.

All ultraviolet light is invisible. UV-C light is much more intense than UV-B (which causes sunburn).

UV-C light sterilizes microbes by disrupting their DNA which prevents them from reproducing.

RESPIRATORY HEALTH

You can't see it but the air you breathe has a direct impact on your health. This is not a medical device but it will reduce indoor air pollution which will improve environmental conditions for people with asthma and similar respiratory conditions.
